sustainable design

Put Connolly Architecture to work for you to exceed expectations with innovative design solutions and inspiring environments.

We listen carefully to you and ask questions to understand your life or business needs and expectations.

Our meticulous attention to detail ensures satisfaction of your current and future needs while always keeping an eye on your budget and scheduling requirements.

Our designs respect and transform the traditions of the past while serving today's 21st century

practical needs and aesthetic sensibilities. We also capitalize on cutting edge materials and state-of-the-art technologies.

You'll also benefit from the latest computer technology used to analyze design options, helping us identify potential sustainable solutions and produce accurate and thorough construction documents.

The bottom line: You will receive innovative thinking, design talent, experience and breadth of knowledge, combined with a strong reputation for customer service.

Sustainable buildings promote environmental and economic sustainability and reduce environmental impact during product manufacturing, construction, and throughout the life of a project.

Sustainable design also aims to reduce emissions of greenhouse gases by reducing reliance on fossil fuels to heat, cool, light and power our buildings, thereby protecting our environment for the future.

We offer expert advice on the financial, health, and environmental advantages provided by sustainable design – helping you make informed choices.

Options are reviewed for reducing energy and water use, passive heating and cooling, renewable energy, use of recycled and renewable materials, and low or no-VOC paints and adhesives that can improve indoor air quality. All these and more!

Sustainable design can be traditional or contemporary. In any style, it works to preserve the environment and save you money in the long run.

HUGH CONNOLLY
AIA, LEEDap
President

With almost 30 years of experience in the architecture profession, Mr. Connolly has designed almost all types of buildings: from luxury custom residences to affordable housing; from stores and restaurants to corporate headquarters; from elementary schools to courthouses.

His innovative thinking, design talent, and extensive breadth and depth of knowledge and experience, combined with a

strong service orientation, have earned him an excellent reputation among clients and colleagues.

Four of his projects have won Downtown New Jersey awards.

Mr. Connolly is a licensed architect in New Jersey and Pennsylvania and is also accredited by the National Council of Architectural Registration Boards,

which facilitates licensing in other states should it be necessary for a client's project.

He is a member of the American Institute of Architects, the Hopewell Business Association, the Princeton Regional Chamber of Commerce, and the US Green Building Council. He is also on the Board of Directors of the Hopewell Harvest Fair.

// Connolly responded by
creating a soaring space.

Master work of design.

Harmony of form and function.

Form and function
artfully integrated.

Eye-catching aesthetics.

As dynamic a design
as seen anywhere. //
